

Devoxx Belgium 2025 Talks sorted by Likes

Source: [Devoxx Belgium 2025 talks](#)

Snapshot date: 2026-10-01

Speaker Stats

- Speaker filter: **Juan Antonio Breña Moral**

The source lists the filtered speaker as **Juan Antonio Breña Moral** and does not provide a company for the speaker in these 2025 records. Percentile rank is tie-aware and uses the midpoint of all talks with the same number of likes within each subsection; a higher percentage indicates a stronger relative position.

Likes distribution with Outliers

The likes distribution across all **227 talks** is **right-skewed** (skewness **+1.22**, standard error 0.16; excess kurtosis **+1.78**): mean **231.0 likes** is above the median **184 likes**, with quartiles Q1 **100** and Q3 **331** (IQR 231), **4 outlier talks** above the Tukey fence of **677.5 likes** (Q3 + 1.5 IQR) and **0 super outliers** above **1024.0 likes** (Q3 + 3 IQR); there are no low outliers, and a long tail up to **963 likes** (minimum **4**). A normal curve is therefore not a suitable model; the chart uses a log-normal fit instead (log-likes skewness -0.63, $\mu=5.16$, $\sigma=0.81$). The 101 Cursor AI talk is at **190 likes** (percentile **52.2%**), just above the median, while the Cursor rules talk is at **77 likes** (percentile **18.1%**), just below the median.

Likes distribution without Outliers

Excluding the **4 outlier talks** above **677.5 likes**, the distribution across the remaining **223 talks** is **right-skewed** but clearly milder (skewness **+0.75**, standard error 0.16; excess kurtosis **-0.34**): mean **220.4 likes** vs median **182 likes**, population standard deviation **146.6 likes**, quartiles Q1 **99.5** and Q3 **323.5** (IQR 224), and values from **4** to **657 likes**. The recalculated Tukey fence is **659.5 likes** and flags no further talks. The log-normal fit is kept for comparison with the previous chart (log-likes skewness -0.72, $\mu=5.13$, $\sigma=0.79$). Within these 223 talks the 101 Cursor AI talk at **190 likes** has percentile **53.1%**, just above the median, while the Cursor rules talk at **77 likes** has percentile **18.4%**, just below the median of **182 likes**.

Hands-on Lab Talks

- Session type: **Hands-on Lab**
- Total talks in cohort: **13**
- Matching talks: **0**
- No matching talks.

Tools-in-Action talks

- Session type: **Tools-in-Action**
- Total talks in cohort: **28**
- Matching talks: **2**
- **101 Cursor AI, Learning to use for Java Enterprise projects** - Juan Antonio Breña Moral — 190 likes; current row **6 of 28**; tied position range **6–6**; percentile rank **80.4%**.
- **The power of Cursor rules in Java Enterprise development** - Juan Antonio Breña Moral — 77 likes; current row **24 of 28**; tied position range **24–24**; percentile rank **16.1%**.

All talks

- Scope: **All session types**
- Total talks in cohort: **227**
- Matching talks: **2**
- **101 Cursor AI, Learning to use for Java Enterprise projects** - Juan Antonio Breña Moral — 190 likes; current row **109 of 227**; tied position range **109–109**; percentile rank **52.2%**.
- **The power of Cursor rules in Java Enterprise development** - Juan Antonio Breña Moral — 77 likes; current row **186 of 227**; tied position range **186–187**; percentile rank **18.1%**.

Talks grouped by Likes

The pie chart groups talks by their number of likes: **56 talks (24.7%)** have 0–99 likes, **67 (29.5%)** have 100–199, **34 (15.0%)** have 200–299, **34 (15.0%)** have 300–399, **30 (13.2%)** have 400–599, and **6 (2.6%)** have 600 or more. The 101 Cursor AI talk at **190 likes** falls in the largest, 100–199 band, while the Cursor rules talk at **77 likes** falls in the 0–99 band.

Likes grouped by Companies

Attributed likes sum to 52,432; fractional totals result from equal allocation on joint-company talks.

The company pie chart allocates each talk's likes equally among its distinct represented companies, so its slices sum to the cohort's **52,432 likes** without double-counting joint talks. It shows the eight largest company totals and the remaining 135 companies as **Other**. Because the source does not provide a company for Juan Antonio Breña Moral, both analyzed talks are included in **Unspecified**, which has **2,414 attributed likes (4.6%)** across eight talks. The analyzed talks contribute **267 likes** to that slice: 190 from 101 Cursor AI and 77 from Cursor rules.

Talks grouped by Company

Talks attributed by company

Multi-company talks are split equally, so attributed talk counts sum to 227

Fractional counts prevent multi-company talks from being counted twice; attributed totals sum to 227.

The company pie chart allocates each talk equally among its distinct represented companies, so the attributed counts sum to the **227-talk cohort** without double-counting multi-company talks. It shows the eight largest company totals and the remaining 135 companies as **Other**. **Unspecified** has **8.0 attributed talks (3.5%)**, including the two talks by Juan Antonio Breña Moral. Fractional attributed counts result from splitting multi-company talks; represented counts include a company in full whenever it appears on a talk.

Likes grouped by Speaker country

"UK" is normalized to "United Kingdom"; attributed likes sum to 52,432 across all countries.

The speaker-country pie chart divides a joint talk's likes equally among its distinct represented countries. It shows the eight largest country totals, **Spain** for Juan Antonio Breña Moral, and the remaining 21 countries as **Other**; **UK** is normalized to **United Kingdom**. Spain has **635.5 attributed likes (1.2%)** across five talks, with the analyzed talks contributing **267 likes**. Country totals include every cohort talk involving that country, not only talks by the analyzed speaker.

Hands-on Lab Talks

- Session type: **Hands-on Lab**
- Matching talks: **13**

Sorted by likes in descending order. Each entry uses the format **TITLE – SPEAKER (COMPANY)** . Talks matching the speaker filter are highlighted in bold and color.

1. **238 likes** — Developing an Asynchronous Application with Virtual Threads and Structured Concurrency - Ana-Maria Mihalceanu (Oracle), José Paumard (Oracle)
2. **187 likes** — Breaking your testing habits - Rick Ossendrijver (Picnic Technologies), Tim te Beek (Moderne)
3. **168 likes** — Hands-On: Building Agents with Spring AI, MCP, Java, and Amazon Bedrock - Josh Long (the Spring team), James Ward (AWS), Maximilian Schellhorn (AWS), Matthew Meckes (AWS)
4. **140 likes** — Fast-Track JDK Tools for the Modern Software Developer - Ana-Maria Mihalceanu (Oracle), José Paumard (Oracle)
5. **137 likes** — Building Private, Scalable AI Applications with Self-Hosted LLMs - Timo Salm (Broadcom), Sandra Ahlgrimm (Microsoft)
6. **122 likes** — Build your AI assistant with Ollama, LLM and Spring - Ivan St. Ivanov (VIDA Software LTD), Valentin Vasilev (Vida Software LTD)
7. **107 likes** — Developing an Asynchronous Application with Virtual Threads and Structured Concurrency - Ana-Maria Mihalceanu (Oracle), José Paumard (Oracle)
8. **99 likes** — Build your own Java-powered Agentic Apps - Georgios Andrianakis (IBM), Mario Fusco (IBM), Kevin Dubois (IBM), Clement Escoffier (Red Hat), Guillaume Smet (IBM)
9. **77 likes** — Modernizing your Java codebase with AI - Kevin Azijn (Amazon Web Services), Adriaan de Jonge (AWS)
10. **71 likes** — Building your AI agent with Agent Development Kit (ADK) and Postgres - Miguel Toscano (Google), Ahmad Adel (Google)
11. **70 likes** — Hands-On: Building AI Agents with Embabel - John Davies (Incept5), James Ward (AWS), Rod Johnson (Embabel)
12. **65 likes** — Building secure AI agents with Quarkus LangChain4j - Willem Jan Glerum (Lunatech), Radek Kargul (Lunatech)
13. **51 likes** — From Scratch to Scalable: Building Smarter AI Agents with Frameworks - Jetro Coenradie (Luminis), Daniël Spee (Luminis)

Tools-in-Action talks

- Session type: **Tools-in-Action**
- Matching talks: **28**

Sorted by likes in descending order. Each entry uses the format **TITLE – SPEAKER (COMPANY)**. Talks matching the speaker filter are highlighted in bold and color.

1. **402 likes** — Be more productive with IntelliJ IDEA - Marit van Dijk (JetBrains)
2. **326 likes** — 30 minutes to understand MCP (Model Context Protocol) - Sébastien Blanc (Port)
3. **264 likes** — Practical API Testing with OpenAPI and Citrus Framework - Timon Borter (PostFinance AG)
4. **209 likes** — Spring Debugger: Behind The Scenes of Spring Boot - Marco Behler (JetBrains)
5. **192 likes** — Securing Your CI/CD Pipelines: Best Practices and Strategies - Adrien Pessu (GitHub)
6. **190 likes** — **101 Cursor AI, Learning to use for Java Enterprise projects - Juan Antonio Breña Moral**
7. **166 likes** — From Space to Code: Using NASA's Open Data APIs with Kepler - Ko Turk (Codelab)
8. **165 likes** — Pod Right-sizing in the Second Decade of Kubernetes - Abdel Sghiouar (Google Cloud)
9. **162 likes** — Coding challenge: AI-test vs PI-test - Frederieke Scheper (Sopra Steria Nederland), Laurens van der Kooi (Sopra Steria)
10. **153 likes** — Hands-on: Backlog.md - Plan Tasks with AI - Alex Gavrilescu (Funstage GmbH)
11. **144 likes** — Spring Boot Testing in Practice: What Changes (and What Doesn't) with GenAI integrations - Andrei Shakirin (AWS (former Pivotal Labs Engineer))
12. **144 likes** — A2A in 30 Minutes: Building Interoperable AI Agents - Loïc Magnette (Oniryx)
13. **133 likes** — Gemini CLI in Action - Wietse Venema (Google)
14. **122 likes** — Wirespec - API design, actually spec first, in your ecosystem - Jerre van Veluw (Flock.)
15. **117 likes** — Joda-Beans, POJO code generation and beyond - Stephen Colebourne (Engine by Starling)
16. **113 likes** — I Lost Weight on Kubernetes with **SlimFaas** - Guillaume CHERVET (AXA France)
17. **111 likes** — Accessibility; beyond the tools - Lucien Immink (Team Rockstars IT)
18. **101 likes** — Integrating OpenAPI Generator into CERN React Apps: Pitfalls and Best Practices from the Frontlines - Stefano Marzo (CERN)
19. **91 likes** — The Yoga of Image Generation with Stable Diffusion & ComfyUI - Raphaël Semeteyts (Worldline)
20. **91 likes** — Picocli: put some Java in your terminal 🐘! - Stéphane Philippart (OVHcloud)
21. **90 likes** — Amazon Q Developer: Your AI Pair Programmer for Java Modernization and Development - Pal Magnus Slatto (Amazon Web Services)
22. **85 likes** — Spec-Driven Development with Kiro: Vibe-Coding with Guardrails - Kevin Azijn (Amazon Web Services), Adriaan de Jonge (AWS)
23. **80 likes** — Paketo Buildpacks: the best way to build Java container images? - Anthony Dahanne (HeroDevs)
24. **77 likes** — **The power of Cursor rules in Java Enterprise development - Juan Antonio Breña Moral**
25. **75 likes** — Think with your hands: introduction to Lego Serious Play - Annabelle Buffart (Llama Corp)
26. **73 likes** — Java Adventures - JTaccuino, Java 25 and AI - Sven Reimers (Airbus)

27. **70 likes** — Hands-on refactoring session with the CodeLaser MCP server - Piet van Remortel (CodeLaser.io), Bart Naudts (CodeLaser.io)
28. **58 likes** — Smart API sandboxes: why? what? how? - Laurent Broudoux (Microcks)

All talks

Sorted by likes in descending order. Each entry uses the format **TITLE – SPEAKER (COMPANY)**. Talks matching the speaker filter are highlighted in bold and color.

1. **963 likes** — Top 10 Event-Driven Architecture Pitfalls - Victor Rentea (Freelance)
2. **852 likes** — The New Java Best Practices - Stephen Colebourne (Engine by Starling)
3. **759 likes** — The Psychology of Code - Victor Rentea (Freelance)
4. **719 likes** — Making significant Software Architecture decisions - Bert Jan Schrijver (OpenValue)
5. **657 likes** — Bootiful Spring AI - Josh Long (the Spring team), Christian Tzolov (Broadcom), James Ward (AWS), Mark Pollack (Broadcom)
6. **617 likes** — The Imperfect Architect - Robin Custers (Cegeka)
7. **585 likes** — Domain-centric? Why Hexagonal, Onion and Clean architecture are answers to the wrong question - Oliver Drotbohm
8. **584 likes** — Agentic AI Patterns - Mario Fusco (IBM), Kevin Dubois (IBM)
9. **553 likes** — Coding, Rewritten: What 10.000+ AI-Generated Code Completions Taught Me About the Future of Software Development - Jeroen Egelmeers (Sogeti Netherlands)
10. **542 likes** — Spring Boot: Chapter 4 - Brian Clozel (Spring team), Stephane Nicoll (Spring Team)
11. **528 likes** — Architecture as Code: Quantifying Architectural Trade-offs - Neal Ford (Thoughtworks, Inc.)
12. **527 likes** — Application Architecture for Real-World Continuous Delivery - Christopher Batey (Core Engineering Consulting Group)
13. **522 likes** — Weather the Storm: How Value Classes Will Enhance Java Performance - Clément de Tastes (SCIAM), Remi Forax (University Gustave Eiffel)
14. **522 likes** — Java Memory Leaks - Victor Rentea (Freelance)
15. **516 likes** — Accelerating Maven Builds: From Snail's Pace 🐌 to Rocket Speed 🚀 - Maarten Mulders (Info Support)
16. **500 likes** — Things You Thought You Didn't Need To Care About That Have a Big Impact On Your Job - Holly Cummins (IBM)
17. **479 likes** — Beyond local tools: Deep dive into the Model Context Protocol (MCP) - James Ward (AWS), Maximilian Schellhorn (AWS)
18. **472 likes** — Finally, final means final - A deep dive into field immutability in Java - Per Minborg (Oracle)
19. **471 likes** — Java and AI - Paul Sandoz (Oracle)
20. **471 likes** — How package encapsulation with Spring Modulith simplified our code - Jos Roseboom (EasingYou)
21. **465 likes** — Structured Concurrency in Action - Nicolai Parlog (Oracle)
22. **461 likes** — What comes after Git? - Christian Schabetsberger (Finxit IT Solutions)
23. **461 likes** — Welcome - Stephan Janssen (Devovx)
24. **457 likes** — Why You Should Build Agents on the JVM - Rod Johnson (Embabel)
25. **456 likes** — Code Review Remarks: Lessons Learned - Blagoj Jovanov (G+D Netcetera)
26. **450 likes** — Java 21 to 25 - Better Language, Better APIs, Better Runtime - Nicolai Parlog (Oracle)
27. **449 likes** — Understanding Prompt Injection - Techniques, Challenges, and Advanced Escalation - Brian Vermeer (Snyk)

28. **439 likes** — Wat? That's possible in Java? - Michael Vitz (innoQ Deutschland GmbH)
29. **435 likes** — Passkeys, one-time tokens: passwordless Spring Security - Daniel Garnier-Moiroux (Spring)
30. **434 likes** — Agent Orchestration with LangChain4J - Lize Raes (Oracle)
31. **421 likes** — Bootiful Spring Boot - Josh Long (the Spring team)
32. **419 likes** — Raising Young Coders - Cassandra Chin (Colorado State University Global)
33. **413 likes** — Java Performance Update 2025: From JDK 21 to JDK 25 - Per Minborg (Oracle)
34. **407 likes** — Creating effective and objective architectural decision records (ADRs) - Piet van Dongen (OpenValue)
35. **405 likes** — Your Code Base as a Crime Scene - Scott Sosna (Scott Sosna Consulting)
36. **402 likes** — Be more productive with IntelliJ IDEA - Marit van Dijk (JetBrains)
37. **399 likes** — Backlog.md - Reaching 95 % Task success rate with AI Agents - Alex Gavrilescu (Funstage GmbH)
38. **396 likes** — TDD & DDD From the Ground Up (Live Coding) - Chris Simon (Chris Simon - Technology Coaching & Advisory)
39. **394 likes** — Pattern Matching, Under the Microscope - Angelos Bimpoudis (Oracle)
40. **394 likes** — Extending Functional Pipeline with Gatherers - Venkat Subramaniam
41. **393 likes** — How to build your own fun and absurd pair programmer - Alexander Chatzizacharias (JDriven)
42. **391 likes** — Why I Am Not Afraid AI Will Take My Job - Maarten Mulders (Info Support)
43. **391 likes** — Local Development in the AI Era - Kevin Dubois (IBM)
44. **386 likes** — Code, burnout and depression: an engineering perspective of mental health in IT - Manuel Bernhardt (manuel.bernhardt.io)
45. **384 likes** — Serialization 2.0: A Marshalling Update! - Viktor Klang (Oracle)
46. **381 likes** — What's new in Spring Modulith? - Oliver Drotbohm
47. **367 likes** — Virtual Threads, Structured Concurrency and Scoped Values: Putting it all together - Balkrishna Rawool (ING Bank)
48. **358 likes** — Spec Driven Development Why your prompt chaos won't scale - Simon Maple (Tessl)
49. **357 likes** — Understanding Kubernetes in a visual way - Aurélie Vache (OVHcloud)
50. **356 likes** — Rise of the Agents: You, AI, and the Future of Society - Martijn Verburg (Microsoft)
51. **353 likes** — Testing Challenges in the Age of AI - Konstantin Pavlov (JetBrains)
52. **353 likes** — Tactical Domain-Driven Design with Java and Spring - Oliver Drotbohm
53. **343 likes** — Not just code. (Ab)using Claude Code to do just about anything but coding - Barry van Someren (CoffeeSprout)
54. **339 likes** — The Three Amigos in Java - Venkat Subramaniam
55. **337 likes** — Gen AI Grows Up: Enterprise JVM Agents With Embabel - Rod Johnson (Embabel)
56. **335 likes** — The Best of Java Shorts Show: 100 Snippets in 50 Minutes - Adam Bien (adam-bien.com)
57. **333 likes** — Behavioral Software Engineering - Mario Fusco (IBM)
58. **329 likes** — Why Haven't They Fixed This? - Stuart Marks (Oracle), Maurice Naftalin (Morningside Light Ltd)
59. **329 likes** — Garbage Collection in Java: Choosing the Correct Collector - Stefan Johansson (Oracle)
60. **326 likes** — 30 minutes to understand MCP (Model Context Protocol) - Sébastien Blanc (Port)
61. **321 likes** — Loom in JDK 25: Virtual Threads, Structured Concurrency, and Scoped Values - José Paumard (Oracle), Remi Forax (University Gustave Eiffel)

62. **321 likes** — Authorization in Spring Security: permissions, roles and beyond - Daniel Garnier-Moiroux (Spring)
63. **315 likes** — Supercharge your JVM performance with Project Leyden and Spring Boot - Ana-Maria Mihalceanu (Oracle), Moritz Halbritter (Spring Team @ Broadcom)
64. **312 likes** — Bootiful GraalVM - Josh Long (the Spring team), Thomas Wuerthinger (Oracle)
65. **308 likes** — A Developer's Search for Meaning: Thriving as AI Transforms Our World - Markus Westergren (Umecon AB), Elma Westergren
66. **305 likes** — AI Agents, the New Frontier for LLMs - Guillaume Laforge (Google)
67. **304 likes** — The Future of Refactoring: Test-Driven Navigation - Alex Bunardzic (Service Points)
68. **303 likes** — Tornado Cash, the World's Biggest Cyber Crimes and Modern Privacy - James Birnie (McBirnie Ltd)
69. **303 likes** — The Diabolical Developer: Rise of the Rogue Agents - Martijn Verburg (Microsoft)
70. **300 likes** — Vibe-coding your way into a security nightmare - Arjen Wiersma (Scyon)
71. **284 likes** — What Can You Do with an Apache Kafka "Queue?" - Sandon Jacobs (Confluent)
72. **284 likes** — Platform Engineering 101: Building Internal Developer Platforms - Maarten Vandepierre (Red Hat)
73. **279 likes** — Java for AI - Paul Sandoz (Oracle)
74. **279 likes** — 30 Years of Java - How Did We Get Here? - Simon Ritter (Azul)
75. **275 likes** — Thirty years of Java development: keeping it all together - Cristian Schusztter (CERN)
76. **269 likes** — How browsers REALLY load Web pages - Robin Marx (Akamai)
77. **269 likes** — A Long Spring: 19 Years of Living with Your Past Mistakes - Arjen Poutsma (Poutsma Principles)
78. **268 likes** — How I Solved Production Issues with OpenTelemetry (And How You Can Too) - Cees Bos (OpenValue)
79. **266 likes** — Unveiling the simple math that powers AI - Marianne Hoornenborg (Dutch Chamber of Commerce)
80. **266 likes** — MCP in Action: Connecting AI to Enterprise Systems - Zineb BENDHIBA (Red Hat / IBM)
81. **264 likes** — Practical API Testing with OpenAPI and Citrus Framework - Timon Borter (PostFinance AG)
82. **260 likes** — When ORM Becomes OMG: Performance Pitfalls in JPA and Friends - Jos Roseboom (EasingYou)
83. **260 likes** — Level Up Your LangChain4j Apps for Production - Lize Raes (Oracle)
84. **255 likes** — Your Survival Guide to AI in Software Development - Rafik FERROUKH (Harvest Groupe)
85. **255 likes** — Discover the Agent Development Kit for Java for building AI agents - Guillaume Laforge (Google)
86. **253 likes** — Securing MCP Servers - Daniel Garnier-Moiroux (Spring)
87. **252 likes** — Ask the architects - Angelos Bimpoudis (Oracle), Paul Sandoz (Oracle), Stuart Marks (Oracle), Per Minborg (Oracle), Viktor Klang (Oracle)
88. **251 likes** — On standards and AI agents: a walkthrough of MCP, A2A, ADK and more - Guillaume Laforge (Google), Mete Atamel (Google), Emmanuel Bernard (Red Hat)
89. **243 likes** — Fixing time zones for fun - twenty programming puzzles to master internationalization. - Martijn van Iersel (TOPdesk)
90. **242 likes** — From LLM orchestration to autonomous agents: Agentic AI patterns with LangChain4j - Georgios Andrianakis (IBM), Mario Fusco (IBM), Clement Escoffier (Red Hat), Stefano Maestri (IBM)

91. **238 likes** — Developing an Asynchronous Application with Virtual Threads and Structured Concurrency - Ana-Maria Mihalceanu (Oracle), José Paumard (Oracle)
92. **236 likes** — Cryptography in a post-quantum world: why our encryption now has a use-by date, and what we need to do about it. - Jules May (22 Consulting Ltd)
93. **220 likes** — You Don't Need a PhD to Try Quantum Computing - Matteo Di Pirro (Kynetics Inc)
94. **219 likes** — What's new in the Gemini universe? - Guillaume Vernade (Google Deepmind)
95. **212 likes** — Six and a half ridiculous things to do with Quarkus - Holly Cummins (IBM)
96. **212 likes** — Live Coding The Hive: building a microservices-ready modular monolith - Julien Topçu (Shodo), Thomas PIERRAIN (Agicap)
97. **209 likes** — The New AI-Native Dev Coding Workflow - Patrick Debois (AI Native Dev)
98. **209 likes** — Spring Debugger: Behind The Scenes of Spring Boot - Marco Behler (JetBrains)
99. **209 likes** — Spring Boot in the Cloud: Advanced Optimization Deep Dive - Patrick Baumgartner (42talents)
100. **208 likes** — Unlocking AI Coding Assistants: Real-World Use Cases - Gunter Rotsaert (ICT TriOpSys)
101. **208 likes** — There may not be intelligent life in our Universe after all. - Robert Pabst (Cinematic Laboratory)
102. **206 likes** — Yes, We Put AI Agents for Healthcare in Production. No, Don't Try This at Home - Marie-Alice Blete (Komodo Health)
103. **201 likes** — Shifting the trajectory: Undoing the damage of working in front of a computer screen - Georgios Diamantopoulos (Zero to MVP)
104. **200 likes** — It's Fine Actually: Doing Better in Legacy Java - Baruch Sadogursky (TuxCare), Pasha Finkelshteyn (BellSoft)
105. **197 likes** — The Bold, the Broken, and the Burned: Hard won lessons in the 6 years of developing Quarkus - Georgios Andrianakis (IBM), Guillaume Smet (IBM)
106. **195 likes** — Bootiful Spring Boot: the Deep-Dive - Josh Long (the Spring team)
107. **192 likes** — Securing Your CI/CD Pipelines: Best Practices and Strategies - Adrien Pessu (GitHub)
108. **192 likes** — Build an MCP Server with Java - Sergio del Amo Caballero (Oracle)
109. **190 likes** — **101 Cursor AI, Learning to use for Java Enterprise projects - Juan Antonio Breña Moral**
110. **187 likes** — Breaking your testing habits - Rick Ossendrijver (Picnic Technologies), Tim te Beek (Moderne)
111. **187 likes** — A Decade of DevOps at ING : The Roaring Shift from Agile Roots to Scalable Platform Engineering - Shivasheesh Tripathi (ING), Iliass Ziani (ING)
112. **186 likes** — How we scaled Continuous Delivery across 1000s of Developers and 100s of applications - Christopher Batey (Core Engineering Consulting Group)
113. **185 likes** — Building AI agents with Structured Outputs, Function Calling, and MCP - Julien Dubois (Microsoft)
114. **184 likes** — Java 25 - "The Next LTS Release" - Nicolai Parlog (Oracle), Georges Saab (Oracle)
115. **183 likes** — YOLO - moving straight to production - Adam Michalik (Rabobank)
116. **182 likes** — Legal JVM dopes for your apps - Dmitry Chuyko (BellSoft)
117. **182 likes** — Hacking your parenting - Patricia Lenten (bol.)
118. **179 likes** — RoboCoders: Judgment Day – AI IDEs Face Off - Viktor Gamov (Confluent), Baruch Sadogursky (TuxCare)

119. **178 likes** — From AI-Infused to Agentic: Building an Enterprise Agentic Framework - Georgios Andrianakis (IBM), Mario Fusco (IBM), Clement Escoffier (Red Hat)
120. **177 likes** — From Vulnerability to Victory: Mastering the CVE Lifecycle for Java Developers - Anthony Dahanne (HeroDevs)
121. **172 likes** — The Road Not Taken: A Developer's Guide to Life Beyond Spring Boot - Frederik Pietzko (iits-consulting)
122. **171 likes** — When auto-scaling isn't fast enough: Handling high volume live event traffic - Ivan Schwarz (DoubleVerify)
123. **171 likes** — Java as an AI development Platform - Zoran Sevarac (Deep Netts Technologies)
124. **171 likes** — Compose and Dragons - Guillaume Lours (Docker), Philippe Charrière (Docker)
125. **168 likes** — Hands-On: Building Agents with Spring AI, MCP, Java, and Amazon Bedrock - Josh Long (the Spring team), James Ward (AWS), Maximilian Schellhorn (AWS), Matthew Meckes (AWS)
126. **166 likes** — The Ultimate Showdown of Database Migration Tools - Pasha Finkelshteyn (BellSoft), Mikhail Polivakha (Spring Añó)
127. **166 likes** — From Space to Code: Using NASA's Open Data APIs with Kepler - Ko Turk (Codelab)
128. **165 likes** — Pod Right-sizing in the Second Decade of Kubernetes - Abdel Sghiouar (Google Cloud)
129. **164 likes** — Outcoded by Our Kids: It Took Us 20 Years, They Used 20 Prompts! - jan van wassenhove (Sopra Steria), Bart Wullems (Vlaamse Landmaatschappij)
130. **163 likes** — Modern Java Puzzlers - Simon Ritter (Azul)
131. **162 likes** — Coding challenge: AI-test vs PI-test - Frederieke Scheper (Sopra Steria Nederland), Laurens van der Kooi (Sopra Steria)
132. **159 likes** — Unifying AI integration with Model Context Protocol - Christian Tzolov (Broadcom), Dariusz Jędrzejczyk (Spring Team @ Broadcom)
133. **159 likes** — Secure by Culture: Building a Developer-Driven Security Mindset - Enrique Larios Vargas (Adyen)
134. **157 likes** — Panel Discussion: LangChain4j Turns Two - What We've Learned and What's Next - Guillaume Laforge (Google), Lize Raes (Oracle), Dimitris Andreadis (Red Hat), Julien Dubois (Microsoft)
135. **156 likes** — Keynote Overflow - Lize Raes (Oracle), Nicolai Parlog (Oracle), Cassandra Chin (Colorado State University Global), Rod Johnson (Embabel), Paul Sandoz (Oracle), Stephan Janssen (Devboxx), Georges Saab (Oracle)
